Familiarizing yourself with these names will empower you to make informed decisions.

Remember these can change at any time. "So Listen Up!" Our kids have learned these names and so can you.

Wax is the crack of pot. It is a concentrated form of marijuana known as butane hash oil (BHO) it is the most powerful form of marijuana. A single hit of this stuff can keep a person high for days.

Butane is a highly flammable chemical used to extract the THC (*Tetrahydrocannabinol*) from marijuana. Many teenagers are unaware of the dangerous high levels of THC content in their body which can have short and long lasting effects on their body as well as their life.

How wax is used.

Wax is made with aerosol butane and the resin of the leaves and buds of the female marijuana plant. The result of the extraction is a yellow-green waxy material that is smoked.

How long does the high last?

That depends on the percentage of the (THC) content. The usual level ranges between 50 and 75% higher levels can keep a person high for a few days.

Are there negative side effects?

Yes officials say that symptoms may include: Psychotic breaks, Hallucinations, Anxiety attacks, Insomnia and Passing out.

According to Dr. Manisha Gopal

Other common psychological illnesses which it may lead to in long term use are- depression, delusional disorders, hallucinations, even schizophrenia..
